# Modules <sup>for</sup> DocuWare

## Query Doc

### IDS QueryDoc

Quickly display a result list with one click.

The IDS QueryDoc module is a Tool to Search a DocuWare File Cabinet, passing various Query Parameters, either at a command Prompt, called within another Application, or used directly within a Windows .BAT or .CMD file.

### Functionality

Access to documents *in* DocuWare can *now* be extended outside DocuWare, allowing query parameters to be passed as command arguments. This allows the integration of this function to be called from within other applications.

IDS QueryDoc Main Screen (Interactive)

**NEW!** QueryDoc – Now Has **Autostart** - Allowing for more efficient use of DocuWare licenses by starting DocuWare if it is not running.

Use it as a poor-man's content folder.  
Works with DocuWare Business

See our website for more uses:  
[www.docuwaremodules.com](http://www.docuwaremodules.com)

Look at the standard features that QueryDoc has:

### Standard Features
